

Limitations & Future work

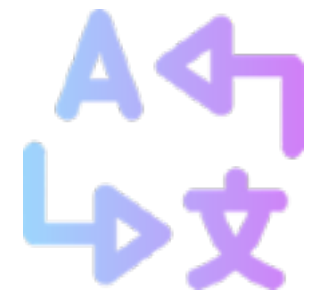

Memorability needs to be evaluated

Effects of discovery process is still unclear

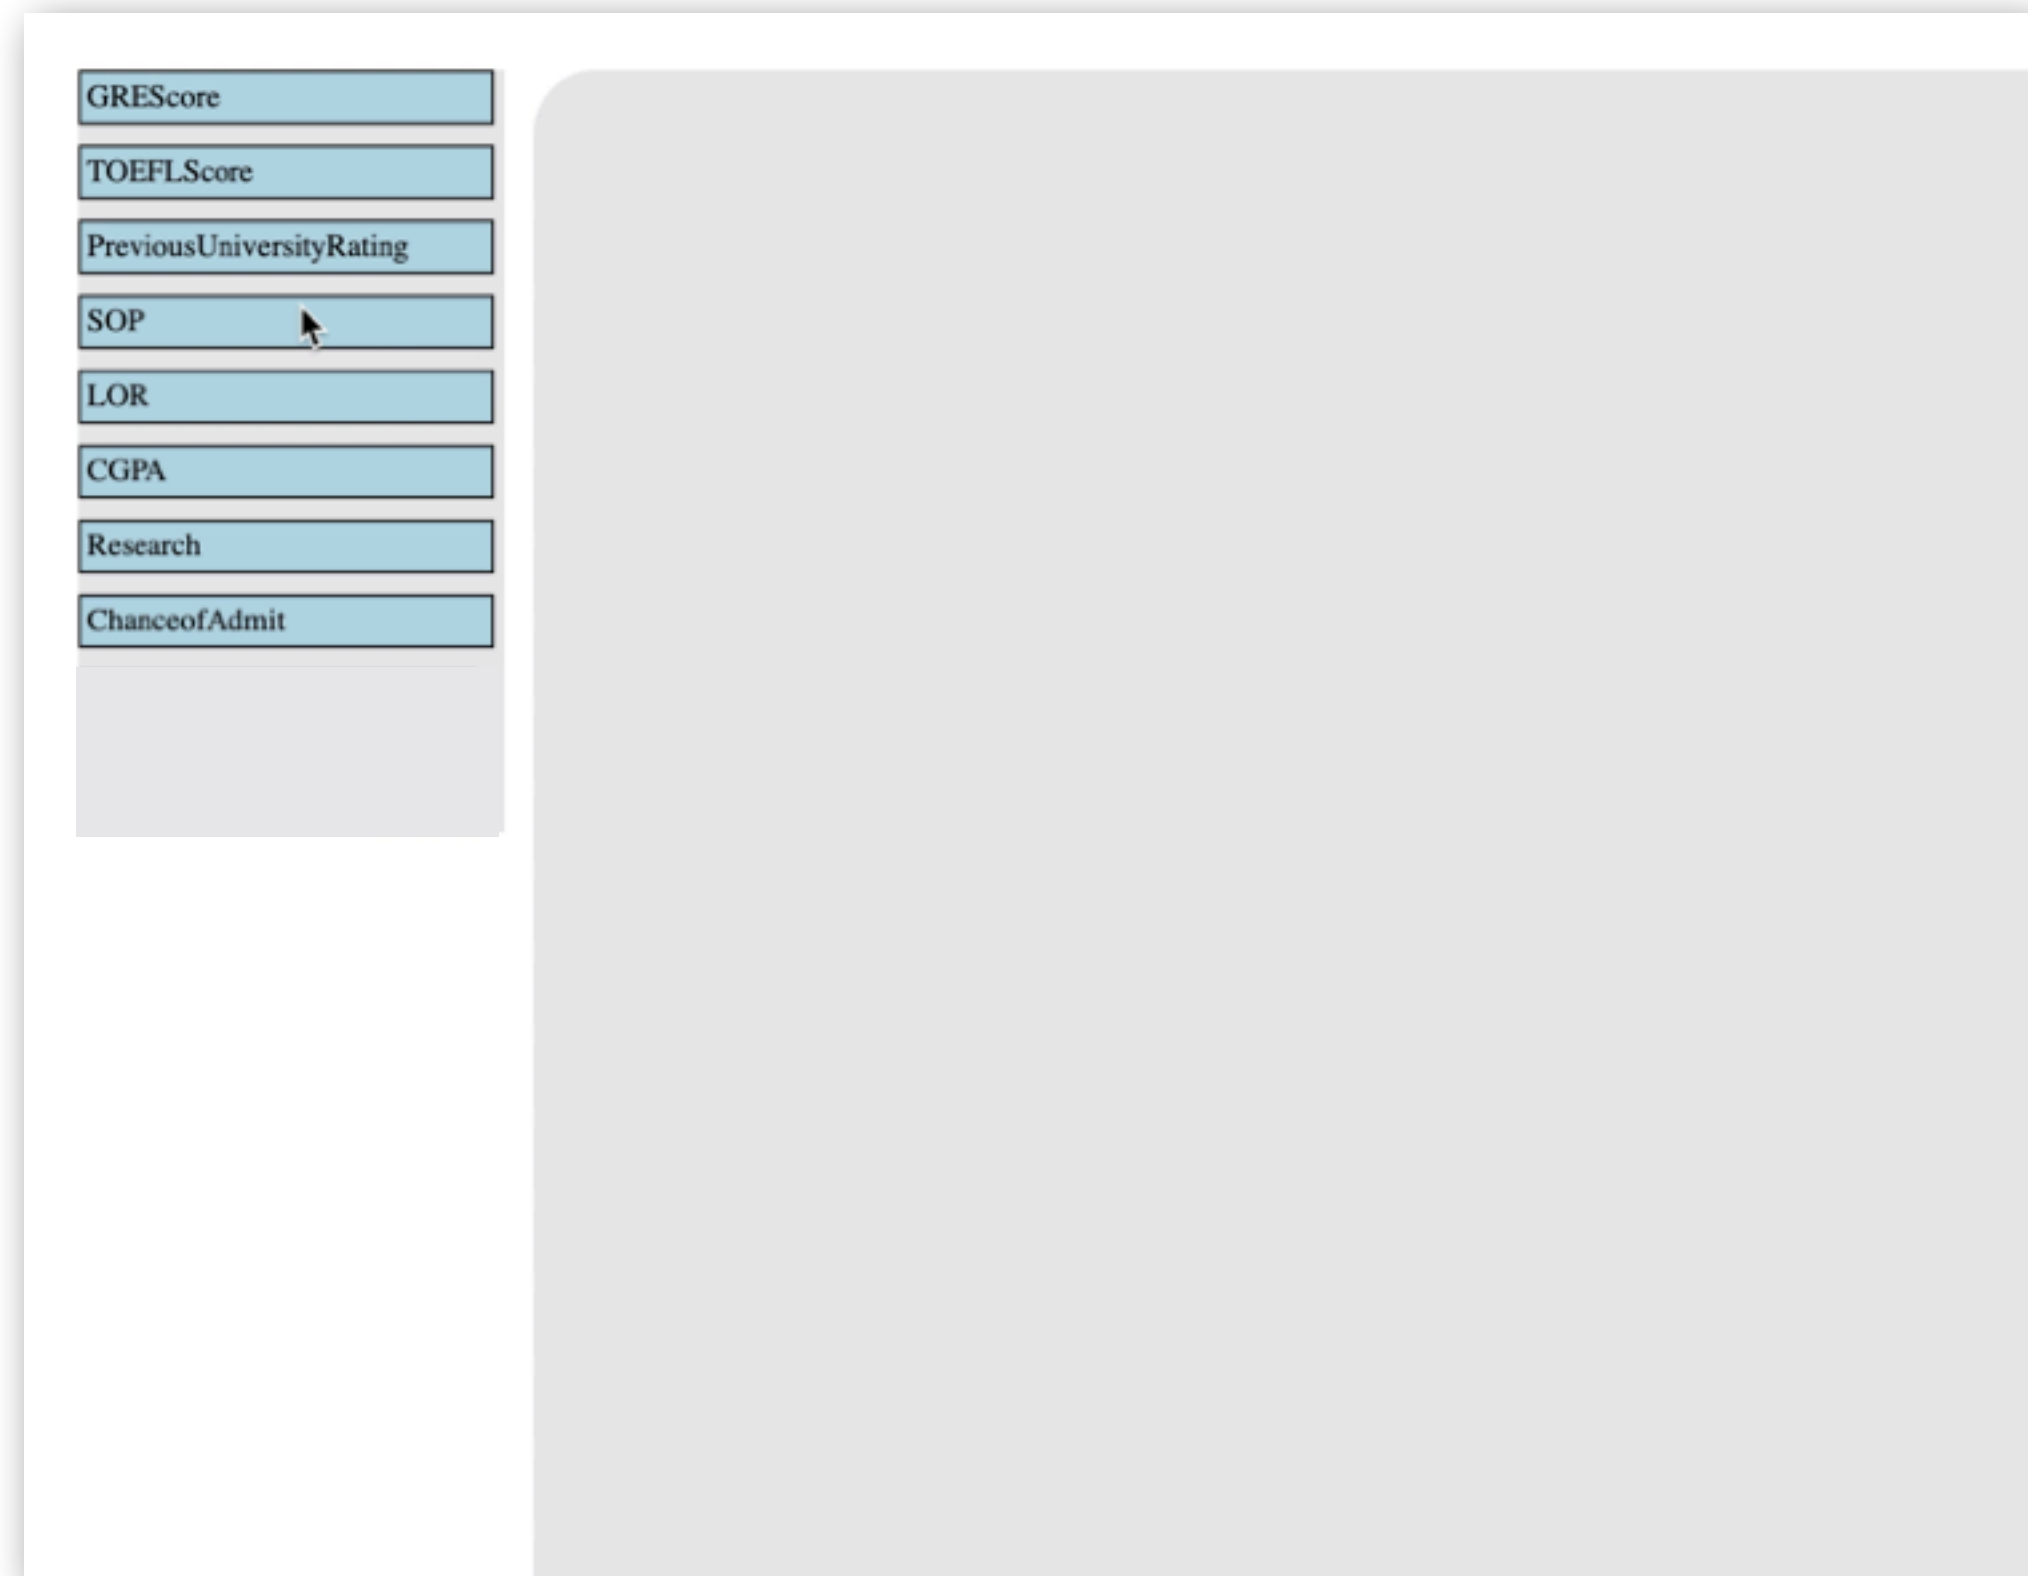

We did not evaluate the correctness of insights reported by participants

Belief elicitation combined with appropriate feedback channels can decrease false discovery in visual analytics.

My Role & Contribution

1. Designed Drag and axis merge in graphs concept

2. Coded HTML and CSS frontend visualizations, refined the color schema for the visualizations

3. Led the user studies through user interviews and Analyzed and coded the results from insights based evaluations

4. Contributed to the publishing of the research paper in CHI' 21 global conference
